

# About Me

1. My name is Jasraj. I am a 4th year Computer Science student.
2. An interesting fact about me is that I'm really interested in cybersecurity and actually enjoy working in security-related roles.
3. I decided to take 2Z03 because I want to learn how to identify real problems and turn them into practical, well-designed solutions.
4. A problem I think isn't solved well is maintaining applications that run for years, where security risks slowly build up because updates and reviews are often overlooked.
5. A frustration I have with current services is how many apps don't clearly communicate security or update risks to users until something goes wrong.
6. For group work, it's best for me to connect after 7pm on weekdays or on weekends.
